The Future is Here

An **OWLWorks** Project
Presented by Michele Jackman

The Future is Here

The world's first virtual shopping center opened in Korea. All the products are just LCD screens that allows you to order the items by touching the screen. When you get to the counter, your items are already bagged and ready to go.

The Future is Here

A cellphone
you can bend
as much as
you like
and it will still
do everything
a smart phone
does.

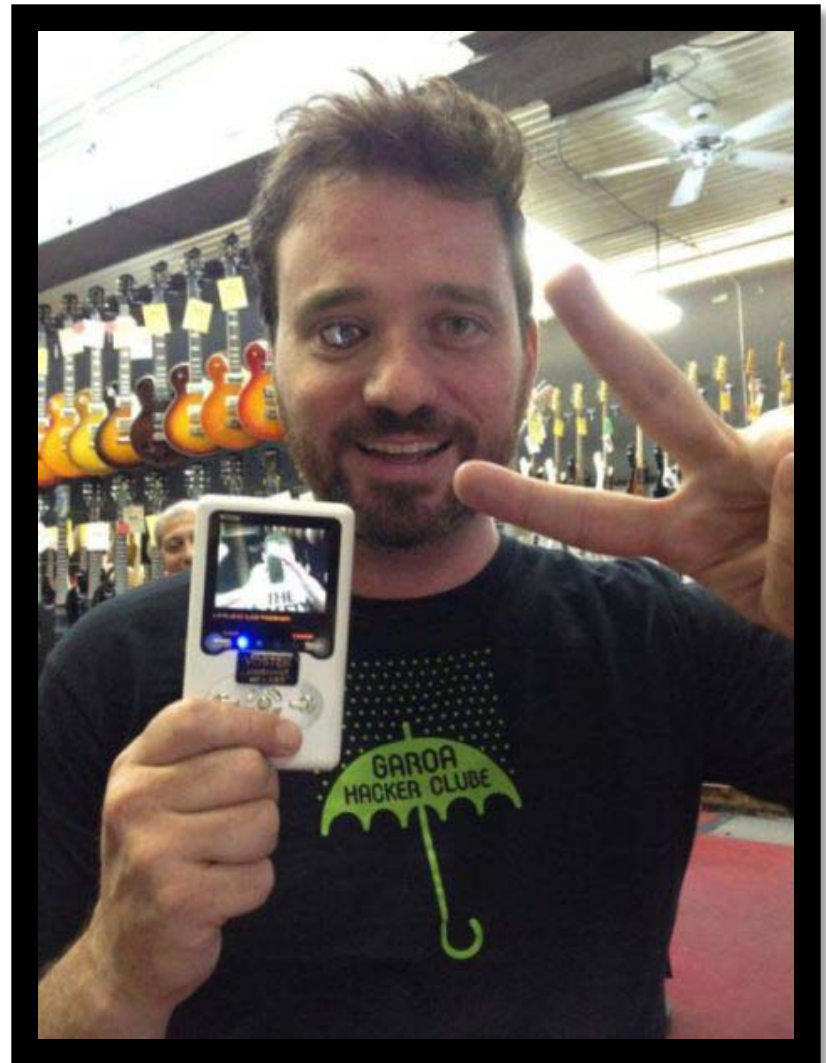

The Future is Here

Your personal computer ring can play music, check your email, give you alerts and even allows you to browse or chat with others.

The Future is Here

Rob Spence is a one eyed filmmaker who has a prosthetic eye with a wireless video camera embedded in it. It's not connected to his brain but it does provide the world's first literal point of view including glancing around and blinking.

The Future is Here

No longer using the camping stove just for cooking, a new line of camping stoves use the heat energy to power up lights and charge your phones or anything else you can charge by USB cable.

The Future is Here

This trash can follows you around and calculates where to stand to catch your thrown garbage!

The Future is Here

Privacy Smartglass, also referred to as privacy glass or switchable glass, is electric switchable glass with adjustable opacity. It uses electro-chromatic technology to interchange between transparency and an opaque state by applying voltage. Privacy Smartglass can change from clear to a frosted appearance at the flick of a switch while allowing light to pass through from both sides.

The Future is Here

This incredible app translates signs from video and in real time!

The Future is Here

New casts can be printed with a 3D printer, are lighter, more comfortable and just as strong.
